# Preface

The aim of this site is to provide all the must known practices when it comes to create a Python package. It offers 10 blog posts, where each of them covers one topic with a few key points. The goal here is to empower anyone with just basic Python knowledge.

We'll over concrete examples, use clear explanations, and try as much as possible to go straight to the point.

## Good to know

- All blog posts are independant. Even if they follow some sort of order, it's perfectly fine to just look at what interests you.

# 1 Introduction to packaging

This is a book created from markdown and executable code.

## 2 Organize a package

This is a book created from markdown and executable code.

## 3 API design

This is a book created from markdown and executable code.

## 4 Handling dependencies

This is a book created from markdown and executable code.

## 5 Unit tests

This is a book created from markdown and executable code.

## 6 Github Actions

This is a book created from markdown and executable code.

## 7 Pre-commit

This is a book created from markdown and executable code.

## 8 Writing documentation

This is a book created from markdown and executable code.

## 9 Errors and warnings

This is a book created from markdown and executable code.

## 10 Publish to PyPI

This is a book created from markdown and executable code.
